SUMMARY

Computer Science student and full stack developer with hands-on experience in Python, backend engineering, and Machine Learning. Comfortable working across the stack — from data pipelines and APIs to deployable ML-driven applications — with a growing focus on AI/ML, cloud computing, and secure system design. Currently seeking internships and open-source collaborations to keep building real-world solutions.

EXPERIENCE

Intern — INDIQUANT (indiquantresearch.in)

2025 — Present

Working as a full stack developer with a specialized focus on backend engineering — designing and maintaining scalable, secure systems for financial data workflows.

PROJECTS

Agro Analytica

[Machine Learning](#) · [Streamlit](#) · [Flask](#) · [Gemini AI](#) · [Weather & Market APIs](#)

A smart agriculture assistant that combines Machine Learning, real-time weather data, and live market prices with Google Gemini AI to help farmers and students make data-driven farming decisions.

Secure Market Data Obfuscation Registry

[Python](#) · [yfinance](#) · [Registry-Based ID Resolution](#)

A registry-driven data pipeline that fetches financial market data via yfinance, obfuscates asset identifiers (tickers), and stores the mapping in a secure registry. A separate resolution pipeline maps obfuscated IDs back to their original identifiers, demonstrating secure, production-style data architecture.

SKILLS

Programming & ML	Python, C, Data Analysis, Machine Learning, NumPy, Pandas, Scikit-learn
Web & Cloud	CSS, AWS, Docker
Design & Media	Photoshop, Premiere Pro, After Effects, Blender

EDUCATION

B.Tech in Computer Science (Dr. B. C. Roy Engineering College (2024-2028))
